

Problem-Solution Fit

3. Project Design Phase | Credit Card Approval Prediction

Prepared For	Prepared By	Domain	Date
Credit Card Approval Prediction	Ankitha Vana	Finance	July 1, 2026

Fit Analysis

Problem	Solution Feature	Benefit
High application volume	Automated prediction form	Faster first-level screening.
Manual errors	Consistent ML scoring pipeline	Reduced inconsistency across applications.
Credit history complexity	Feature engineering for payment status	Clearer identification of risky applicants.
Slow customer feedback	Self-service eligibility check	Applicants receive instant guidance.
Scalability limitation	IBM Watson Machine Learning deployment	Cloud-ready prediction access.

Business Value

- Improves review speed for finance teams.
- Supports objective, repeatable decisions based on historical data patterns.
- Reduces unnecessary applications by helping customers check eligibility early.
- Creates a reusable ML pipeline for future financial risk assessment solutions.

Limitations and Controls

- The model should be reviewed for bias before production use.
- Final approval should include bank policy and human oversight.
- The dataset must be updated regularly to prevent outdated risk patterns.
- Prediction explanations and logs should be added for audit readiness.
